

Figure 1. 2-D multidimensional scaling of correlations among 18 feelings. Proximity reflects the similarity of correlations with the other feelings (low Euclidean distance based on item Z-scores.) U.S. 1996 General Social Survey.

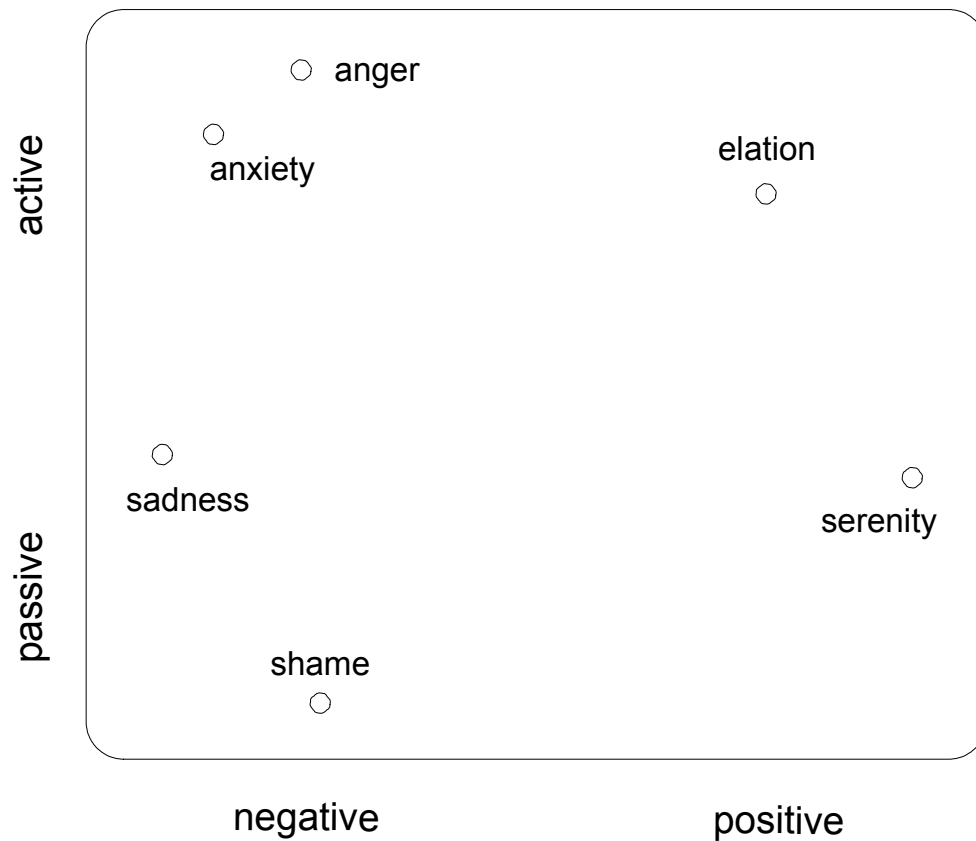

Figure 2. 2-D multidimensional scaling of correlations among six indexes of emotions. Proximity reflects the similarity of correlations with the other indexes of emotions (low Euclidean distance based on item Z-scores.) U.S. 1996 General Social Survey.
